## Chapter VI <br> Parameters of a Random Variable

## Exercises

## 6. 1.

Let the random variable $X$ have the probability function

| $x_{i}$ | -3 | 0 | 1 | 2 | 3 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $P\left(X=x_{i}\right)$ | 0.1 | 0.15 | 0.1 | 0.25 | 0.4 |

Find
a) the distribution function of $X$.
b) $P(X>0)$.
c) the expected value and the dispersion of $X$.

## 6. 2.

An apparatus comprises 3 sensitive elements. Let $p_{i},(i=1,2,3)$, denote the probability that the $i$ th element falls out.
Find the expected value of the number of elements that will fall out.

## 6. 3.

Consider the function $f$ with

$$
f(x)=\left\{\begin{array}{cc}
\alpha x^{2}(1-x) & 0 \leq x \leq 1 \\
0 & \text { otherwise }
\end{array}\right.
$$

a) For what value of $\alpha$ will $f$ be the density function of a random variable $X$ ?
b) Find the distribution function, the expected value and the dispersion of $X$.
c) Determine $P\left(X<\frac{1}{2}\right)$ and $P(X<E(X))$.

## 6. 4.

The following table identifies the probability that a computer network will be inoperative for the indicated number of periods per week during the initial installation phase for the network:

> Number of Inoperative Periods per Week for a New Computer Network

| Number of periods $(X)$ | 4 | 5 | 6 | 7 | 8 | 9 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Probability $(P(X))$ | 0.01 | 0.08 | 0.29 | 0.42 | 0.14 | 0.06 |

## Calculate

1. the expected number of times per week that the network is inoperative
2. the variance
3. the standard deviation
for this variable.
